

Give ruminants an advantage with AmpliSource Edge.

Are your livestock rations delivering enough energy? AmpliSource Edge is proven to increase daily gain for beef cattle and butterfat and protein components in milk for dairy cattle.

A HIGH ENERGY REPLACEMENT

- We blend chocolate, pasta, cereal, crackers, cookies, breads, sugars, nuts and other foods milled with agricultural commodities to create a finished, high-energy feed component.
- It's typically used as a replacement energy source for corn, cottonseed, bakery byproducts, molasses and any other sugar or fat source in the ration.
- Since 1987 we've consistently product tested and regularly monitored general feed components, sugars, fatty acids, amino acids, mycotoxin and microbiology.
- Shown to increase butterfat and protein components in milk while increasing dry matter intake.

AN ECONOMICAL DECISION

- Transportation price quotes are fast and efficient, addressing needs such as a walking floor, belt trailers, dump, etc.
- Storage needs are simple. All it requires is protection from moisture in a commodity bay or bin.

A SUSTAINABLE CHOICE

- An easy way to reduce your environmental footprint. The byproduct from food manufacturers upcycled more than 100,000,000 lbs. last year alone.
- Enjoys a common shelf life of 2 months if stored appropriately.
