

# Amplify every advantage with AmpliSource Max.

Are your livestock rations delivering enough energy? AmpliSource Max provides a consistent boost over typical feed — we have the studies to prove it — with enhanced storage and application flexibility.

## A HIGH ENERGY REPLACEMENT

- We blend chocolate, pasta, cereal, crackers, cookies, breads, sugars, nuts and other foods milled with dry products to create a finished, high-energy feed component.
- It's typically used as a replacement energy source for corn, cottonseed, bakery byproducts, molasses and any other sugar or fat source in the ration.
- Since 1987 we've consistently product tested and regularly monitored general feed components, sugars, fatty acids, amino acids, mycotoxin and microbiology.
- Shown to increase butterfat and protein components in milk while increasing dry matter intake.

## AN ECONOMICAL DECISION

- Transportation price quotes are fast and efficient, addressing needs such as auger, walking floor, belt trailers, etc.
- AmpliSource Max can be utilized with an auger and stored in a bin.
- Storage needs are simple. All it requires is protection from moisture in a commodity bay or bin.

## A SUSTAINABLE CHOICE

- An easy way to reduce your environmental footprint. The byproduct from food manufacturers upcycled more than 100,000,000 lbs. last year alone.
- Natural cattle feeding programs have accepted AmpliSource Max into their feeding programs.
- Enjoys a common shelf life of 2 months if stored appropriately.
